

ENVIRO-SAFE

REFRIGERANTS

MANIFOLD #100 (NOT FOR USE WITH R410 SYSTEMS)

1. Remove contents from package
2. Shut off manifold on/off valve before making any connections of hoses or a/c equipment
3. Connect hose ends, without depressor, to manifold
4. End of hoses with depressor go to a/c and product connections
5. Hose attached to manifold coming out of bottom with depressor is connected to a/c service port
6. Hose attached to manifold on side of gauge is attached to product refrigerant
7. Use shut off valve on manifold to regulate refrigerant flow
8. When shut off valve is closed you will read the a/c pressure of a/c
9. When valve is open you will be inserting refrigerant into system

NOTE: To be used by professional personnel only. Always follow manufacturer's specifications. Always wear your Personal Protective Equipment when servicing any a/c. Refrigerant is very cold and may cause frost bite.
